Dr. Gabriel Wallau, Oswaldo Cruz Foundation (Brazil)

Dr. Gabriel Wallau is a Public Health researcher at the Oswaldo Cruz Foundation working on genomics of pathogens and vectors. His research is focused on studying the coevolutionary arms race between pathogens and hosts employing high throughput molecular biology techniques. In the last years, contributed to the establishment of the Fiocruz COVID-19 Genomic Network where he is responsible for the development of computational pipelines for SARS-CoV-2 genomic analysis that allows in depth characterization of intrahost variants and coinfection events.
